

New Design 430/440 Water Stop

The new design Manugraph DGM water stops for 430 and 440 presses have the following features:

- Assembly attaches to existing unit water pan bracket holes, no drilling required.
- 3" wide segments can be quickly adjusted or moved for different web width needs.
- Entire bar assembly can be removed by loosening two knobs. Quick removal allows for unobstructed access to water pan.
- Stainless steel construction including all threaded hardware.
- *Designed to work with current unit guarding without modification.
- **Designed to work with current MDGM water fill tubes.

* Older unit guarding may require minor modifications. MDGM does not recommend or take responsibility for unsafe modifications or removal of safety guards. All safety guards should be intact and functional according to all applicable safety regulations.

** The water stop assembly was designed to work with current MDGM water pan fill tubes. However, due to installation variations, some water plumbing may need to be modified for water stop installation. Any modifications required are the responsibility of the customer.
