

1030/1035 DP GUIDE UPGRADE

Do you have a 1030/1035 folder with Double Parallel built prior to July 2006? Do you want a more accurate fold out of your DP cylinder?

Upgrade!

The new Manugraph DGM double parallel guides give you the following benefits:

- Better product guidance leading to a consistently square fold and smoother delivery from the double parallel cylinder.
- Much longer guide life compared to the old style combing blade guides.
- Solid steel guide pan - no more belts to deal with.
- Simpler design leaves more access to the DP cylinder for clearing jams or for service.

Upgrade includes all the parts to complete the double parallel guide assembly and hardware.
