

1030/1035 PIN POST PIN UPGRADE

Do you have a 1030/1035 folder built prior to September 2005? Your old pin post pins are not as hard as the current design and can wear relatively quickly, affecting your pin timing and fold accuracy. Save yourself the hassle of replacing worn pin post pins, and get yourself some insurance that your 1030/1035 will continue to perform consistently.

Upgrade!

The new Manugraph DGM pin post pins gives you the following benefits:

- Hardened steel pins pressed into clevises for better wear - last up to 3 times longer between replacement.
- Self-locking retaining rings to hold the pin posts in place for ease of assembly.

Upgrade includes new pins, pin posts, clevises, clevis pins, retaining rings, bushings and hardware.

OR

Upgrade with a whole new pin shaft assembly. This includes the above parts plus a new pin shaft, cam follower, bearings, spacer, and hardware.
