

1030/1035 RTF UPGRADE

Are you in the market for a new RTF or do you have a 1030/1035 folder built prior to September 2006?

Upgrade!

The new Manugraph DGM sprayed RTF gives you the following benefits:

- A harder surface for decreased wear at the trolley wheels.
- Sprayed textured surface for increased web tension and better web control.
- Removable center anvil with slitter groove.
- The surface can be re-sprayed to original specifications so future replacement is not required, saving you money down the road.

Upgrade includes a new sprayed RTF with anvil, 2 new bearings, and the RTF drive belt*.

** Manugraph DGM recommends replacing the belt when replacing the RTF.*
